Unit 5 : Session 10 : SLO 1 | Real-Time Interaction Through Trigger Functions

I. Questions & Answers

1. Trigger function is a callback function registered to a widget (or event) that is automatically invoked when the associated event fires, e.g. a button's command function.
2. When they execute at the moment the triggering event occurs (button click, key press, timer), dispatched by the event loop in real time, not at a fixed point in the program's sequence.
3. Simple trigger function is
 - import tkinter as tk
 - def on_click():
 - print("Button triggered!")
 - root = tk.Tk()
 - tk.Button(root, text="Fire", command=on_click).pack()
 - root.mainloop()
